

FAILED EXTERIOR EXPANSION JOINTS CAUSE

Air infiltration • ICE and CONDENSATION • Increased Energy Costs • Visible contamination • Additional maintenance
FSMA non-compliance • Hazardous work conditions • Product loss due to contamination

EXPANSION JOINT SEAL

From our 17 years' experience, another opportunity to save energy is to seal the expansion joints. Building movement of a thermal-controlled building and the ensuing pressure created puts extreme stress on the expansion joints creating vapor barrier discontinuity. An intact vapor barrier covering the expansion joints prevents air infiltration, alleviating the building of all the defects listed above. Vapor Armour's patented Vapor Shield™ detail permanently seals this connection. Eliminates air infiltration, ice, and condensation.

Eliminates air infiltration, ice and condensation

Reduces energy usage by 15–21%

Is compatible with any construction type (IMP, Concrete, Wood, etc)

Is FSMA compliant

Includes a 15-year "No Ice-No Condensation-No Cost" Warranty

DEDICATED TO ELIMINATING VAPOR DRIVE IN EVERY THERMAL-CONTROLLED FACILITY
